## PROFILE

A passionate Full Stack Developer, I build and deploy full-scale web and mobile applications using technologies like React, Flutter, and Django. My personal project work demonstrates my ability to independently manage the entire development lifecycle.

## EXPERIENCE

My entire coding journey has been a self-directed masterclass in full-stack development, fueled entirely by personal projects. I don't just follow tutorials—I conceive, architect, and bring to life fully-functional applications. This hands-on, build-and-break cycle has given me a deep, practical mastery of the entire development lifecycle, proving I can own a project from a blank screen to a live deployment.

- E-commerce Website (React/Django Rest Framework) include payment method (Stripe)
- Portfolio website with React
- Loading website with React.
- E-commerce Flutter app

## CERTIFICATION

- Meta Principles of UX/UI Design
